With thirty years experience designing some of the world’s finest woodburning and multifuel stoves, we are pleased to introduce the award winning range of ACR premium quality electric stoves. As our lives become ever more hectic and our homes more efficient, it may not always be practical to install a real traditional woodburning stove.

Our innovative electric stoves now offer you similar ambience and enjoyment. Designed and engineered from the ground up to meet the needs of modern room heating, we have used our extensive expertise with stove manufacturing to create a range of truly ingenious electric stoves.

We construct our electric stoves from premium grade lightweight steel, beautifully finished in traditional black powder-coat finish, for an authentic look and feel. This also makes the stoves incredibly durable, as such they all come with a two year warranty as standard.

Our electric stoves have been equipped with some of the most advanced technology available featuring 3D holographic projection. This creates an incredibly realistic appearance of flickering flames in the front, centre and rear of the fuel bed. With four whisper quiet settings - high flame, medium flame, low flame and smouldering embers, there will always be a setting to suit your mood.

All stoves have two heat settings - 1Kw and 2Kw to provide instant heat with thermostatic control and the convenience of a seven day timer, all adjustable from the fully programmable remote control. There is also an option for the flame effect only with no heat.

For thoroughly modern homes and living, our range of electric stoves really do offer the best of traditional and contemporary, with all the convenience you could hope for.
STOVE CONSTRUCTION

Our range of electric stoves are manufactured from lightweight, but durable steel and finished in a traditional black powder-coat, to keep them looking their best for many years. As electric stoves do not reach the very high internal temperatures of a woodburning stove there is no need for cast iron or heavyweight steel components. This means our stoves are lighter in weight, but still retain the look and feel of a real stove and offer much greater durability than similar products.

THE ELECTRIC FIRE EXPERIENCE

Featuring incredibly realistic 3D holographic flame projection, with an additional blue flame option and four settings - high flame, medium flame, low flame and a smouldering embers effect, our stoves really do have that real fire ambience. LED lighting ensures longevity and lower running costs. Realistic ceramic logs resting on a bed of crystals give the appearance of glowing embers and further adds to the atmosphere. There are two heat settings - 1Kw and 2Kw and also a no-heat setting so you can still enjoy the flame effect on warmer evenings or for when no additional room heating is required. All of our electric stoves feature a thermal cut-out safety device to protect the appliance from over-heating.

PUTTING YOU IN CONTROL OF YOUR STOVE

All of our stoves are supplied with a convenient 2-in-1 intelligent remote control. All the day-to-day functions, such as turning the stove on and off and adjusting the flame effect settings, are directly accessible with an LED screen to show your chosen settings. Slide open the lower section of the handset to reveal the programmable seven day timer facility with a three settings per day timer and fully adjustable thermostatic control. All our stoves also feature on-board controls for turning the stove on and off and for adjusting the heat and flame effect settings too.

2 YEAR WARRANTY

Designed and engineered to the highest standards we pride ourselves on offering a premium quality electric stove experience, this is fully backed up by our extensive two year warranty for your peace of mind.

INSTALLATION INFORMATION

Our electric stove range offers incredible realism and heat from just the flick of a switch. In most instances, you can simply plug in and you’re up and running, but please note that clearances to combustibles must be observed and a hearth may be required. Please consult your ACR dealer for further information if you are unsure.

Essential stove information

STOVE CONSTRUCTION

Our range of electric stoves are manufactured from lightweight, but durable steel and finished in a traditional black powder-coat, to keep them looking their best for many years. As electric stoves do not reach the very high internal temperatures of a woodburning stove there is no need for cast iron or heavyweight steel components. This means our stoves are lighter in weight, but still retain the look and feel of a real stove and offer much greater durability than similar products.

THE ELECTRIC FIRE EXPERIENCE

Featuring incredibly realistic 3D holographic flame projection, with an additional blue flame option and four settings - high flame, medium flame, low flame and a smouldering embers effect, our stoves really do have that real fire ambience. LED lighting ensures longevity and lower running costs. Realistic ceramic logs resting on a bed of crystals give the appearance of glowing embers and further adds to the atmosphere. There are two heat settings - 1Kw and 2Kw and also a no-heat setting so you can still enjoy the flame effect on warmer evenings or for when no additional room heating is required. All of our electric stoves feature a thermal cut-out safety device to protect the appliance from over-heating.

PUTTING YOU IN CONTROL OF YOUR STOVE
